Specialty: Physician
Associate**VIRTUAL VISIT Sleep Medicine****Referring:** Leah B Baruch MD**Primary Care:** Leah B Baruch, MD**ASSESSMENT/PLAN**

Katrina Lee Nogoy has a history of hypertension, BMI 46, T2 diabetes mellitus, hypothyroid, GERD, PCOS. She has obstructive sleep apnea, treated with PAP therapy, recently started on a new device. She has had difficulty with use of PAP related to high anxiety with use currently, with FFM.

8/2/25 WatchPAT test revealed **severe Obstructive Sleep Apnea**. The pAHI (3%) was 59/hr, pAHI (4%) was 44/hr. **The SpO2 nadir was 83%. There were 7.8 minutes spent \leq 89%.**

Data reviewed in Airview DME is Sleep Metrics.

Katrina has not yet been compliant with CPAP; defined as \geq 70% of nights exceeding 4 hours of use for a 30 day period. She has efficacy of therapy and a rAHI of 0.9 events/hr, when using therapy.

- We discussed acclimation to PAP therapy in the setting of anxiety and panic when using currently.
- Suggested a change to a nasal mask, and very gradual daily acclimation to use during the day, then acclimating to nighttime use.
- We adjusted her pressure from 5-12 to 5-10 cwp in the hope that she will tolerate this better.
- Compliance and efficacy data reviewed with patient, trouble shooting provided and questions answered.
- Followup: 2 months with any provider, sooner prn.

Subjective

Katrina is a 39 year old female with obstructive sleep apnea. She states that she is not having a great time with PAP related to anxiety. She does not use it regularly, and has to take it off related to having a panic attack.

She feels that she needs to make the time to practice more with the therapy. She has a FFM and does not report nasal obstruction. She is open to trialing a nasal mask, and with daytime acclimation in an effort to increase night time regular use, ultimately.

She is now working day shift, rather than nights as previously. She reports frequent nighttime awakenings, possibly related to apneic events.

The Epworth Sleepiness Scale score is 2/24 which is not indicative of excessive daytime sleepiness.

Patient Active Problem List**Diagnosis**

- Circadian rhythm sleep disorder, shift work type

Nogoy, Katrina Lee (MRN 07189269)

Encounter Date: 12/12/2025

- OSA (obstructive sleep apnea)
- Class 3 severe obesity due to excess calories with body mass index (BMI) of 40.0 to 44.9 in adult
- Recurrent major depressive disorder, in full remission
- Acquired hypothyroidism
